

Guardian Ambient Sensor Technical Specification

The Guardian RF Temperature Logger/Transmitter has a range of up to 100 metres (line of sight), an unlimited number of wireless loggers can be utilised at any one time using the Guardian systems Base Stations.

The Guardian temperature logger incorporates an internal NTC thermistor sensor. It records temperature over the range of -40 to 85 °C and can record store up to 16000 readings.

These RF loggers are housed in a waterproof, ergonomic case that is designed to meet IP66/67 protection. Each RF logger is a self-contained, battery powered unit that can receive, log, store and transmit data to the RF receiver.
